

MUH. RAFIANTO

[LinkedIn](#) | mr.rafianto@gmail.com | Makassar, Indonesia

SUMMARY

Informatics Engineering student with practical experience in Fullstack Web & Mobile Development. Skilled in building responsive Frontend interfaces and managing Backend data workflows. Proven track record in freelance web development for small businesses and developing Decentralized Applications (DApps) involving Blockchain integration.

EDUCATION

Universitas Muslim Indonesia <i>Undergraduate of Informatics Engineering</i>	Indonesia, Makassar From 2022
SMK Darussalam Makassar <i>Software Engineering</i>	Indonesia, Makassar 2019 – 2022

INTERNSHIP & WORKING EXPERIENCE

PT Angkasa Pura Indonesia (InJourney Group)

Intern – Airport Technology Division (Sultan Hasanuddin International Airport) June - July 2025

- Actively involved in maintaining and optimizing **IT systems** and **hardware** for **airport operations**, ensuring seamless functionality and reliability.
- Contributed to the **development** and **successful implementation** of an **IoT project** that is now used in daily airport operations, directly enhancing **operational efficiency** and **safety**.
- Collaborated with senior engineers to **troubleshoot** and **resolve technical issues**, **improving the overall performance** and **reliability** of **airport systems**.

Freelance Web Developer

Freelance - Remote

- Developed **website** for small businesses, focusing on **user experience** and **responsive design**, enhancing client engagement and conversions.
- Translated non-technical client requirements into functional technical specifications, ensuring final deliverables met business goals and were fully mobile-responsive.
- Conducted website maintenance and performance optimization, ensuring cross-browser compatibility and fast load times.

PT Telekomunikasi Indonesia (WITEL Sudiang, Makassar)

Intern – Administrative & Network Support January - April 2021

- **Managed** and **maintained customer records** and **technician stock usage** through **accurate data entry** and **real-time inventory updates**, ensuring **smooth administrative operations**.
- **Organized** and **structured technician data** and **logistics** to support **efficient coordination** and **reporting**, enhancing **field team effectiveness**.
- **Performed maintenance** and **troubleshooting** on **network infrastructure**, from **server** to **ODC**, **ODP**, and **fiber-optic connections**, including **router installations** and **broadband equipment upkeep**, to ensure **reliable connectivity** and **operational efficiency**.

CERTIFICATION & SKILLS

Programming Language	: Kotlin, HTML, CSS, JavaScript, PHP, Python, SQL, MySQL.
Web & Backend	: REST API Integration, Responsive Web Design, Zero-Knowledge Proofs (Plonky3), Smart Contracts, Serverless Architecture.
Tools & Platforms	: Git/GitHub, Android Studio, VS Code, Figma, Google Cloud Platform (GCP).
Soft Skills	: Technical Troubleshooting, Client Requirements Gathering, Logic & Algorithms.

Mobile Developer (Kotlin) Certification :

- Belajar Pengembangan Aplikasi Android Intermediate (Dicoding Academy)
- Belajar Fundamental Aplikasi Android (Dicoding Academy)
- Belajar Penerapan Machine Learning untuk Android (Dicoding Academy)
- Belajar Membuat Aplikasi Android untuk Pemula (Dicoding Academy)
- Memulai Pemrograman dengan Kotlin (Dicoding Academy)

Language : Indonesian (Native), **English (Intermediate)**, German language (Elementary).

ORGANIZATION & VOLUNTEERS EXPERIENCE

- Head of Technical Department DSC UMI | Organization
- Cohort at Bangkit Academy 2024 By Google - Android Learning Path | Participant | Organization
- GDSC Universitas Muslim Indonesia 2023/2024 | Android & Multiplatform Technical Division Core Team | Organization
- GDSC Fest 2024 X Fikom UMI | Logistics Division | Volunteer
- GDG Makassar Devfest 2023 Volunteer | Logistics Division | Volunteer
- Student Council – Human Resources Division | Organization

PROJECTS

Our Indonesia Voice

- **Tech Stack:** JavaScript (ES6+), React.js, Node.js, Express, MongoDB, Solidity, Hardhat, Web3.js/Ethers.js, Lisk (Layer 2).
- **Developed** a decentralized application (DApp) for AI data collection using the **MERN Stack**, integrating a custom **REST API** with the **Lisk Sepolia** blockchain testnet.
- **Engineered** secure **Smart Contracts** in **Solidity** to automate payment distribution and implement a "Double-Blind" consensus mechanism for data verification.
- **Implemented** a B2B revenue model via smart contract logic, successfully coding a 15% automated transaction fee deduction for platform sustainability.
- **Optimized** frontend performance in **React.js**, creating a responsive audio recording interface that interacts directly with crypto wallets (MetaMask) for signing transactions.

Implementation Blockchain Integrated with Android for Digital Identity DApp (Thesis Project)

- Developing a **serverless Decentralized Application (DApp)** using **Kotlin** and **Zero-Knowledge Proofs (ZKP)** on the Polygon Amoy testnet
- Engineered a **Client-Side Proving** mechanism where the Android app generates proofs locally and interacts directly with smart contracts, eliminating the need for a backend server
- Designed a decentralized architecture that reduces server costs and latency by leveraging direct App-to-Blockchain communication for identity verification.

AI Content Automation Pipeline (N8N Project)

- **Backend Automation:** Built an automated content processing workflow using **REST APIs** (Gemini/OpenAI) to ingest and process video data
- **Logic Implementation:** Engineered the data flow to filter content based on sentiment analysis, demonstrating capability in system integration and complex logic handling.
